

1. If everybody had to buy the same amount of land, what would the income gradient look like?
2. What would happen to the wage gradient if transportation costs fell?
3. Why do poor people live on the most expensive land?
4. If you look at density gradients across different cities, it seems like the flatter the density gradient the more likely the city has a flat rent gradient. Why is that?
5. What would happen to market areas of gas stations if cars had bigger gas tanks?
6. Two movie rental stores would not want to be located near each other, while two shoe stores would. Explain.
